AB - J62030200 Cosmetic soap is prepd. by blending, in a solid soap, plant seeds/plant solid particles or mineral/synthetic solid particles with a 0.01-1 mm3 vol. by the ratio of 1000-50000 per cm3.
- Pref. plant seed/particle is grape seed, apricot seed, walnut seed, powder or coconut fibre, and sesame particles. Mineral particles are sand, pebble, glass particles, and artificial pearl particles. Synthetic particles are powders or synthetic resins and polypropylene particles.
- ADVANTAGE - Rubbing with the particles removes first cells, and then sebum and its acidified prods., perspiration and its residue, external dirt, or bacteria to clean the pore and the outlet of a sweet gland. The rubbing also stimulates and activates basal lamina cells of the epidermis, resulting in recovery of the cells and cure of pigmentation diseases. The soap stimulates and activates both the outside and inside of the epidermis.
